

Homework 6: Due 10am on 19-Feb.

1. Reproduce the Figure in Example 6.6 of the book. You don't need to plot the figure for the Gridworld, just plot the figure showing the performance (i.e., the figure where the x-axis is the episodes and y-axis is sum of rewards during episode)
2. Generate the curve for Expected Sarsa using the same setup in Example 6.6, and then add the curve for Expected Sarsa to the figure you generated for the first problem (i.e., you will have three curves: Sarsa, Q-learning and Expected Sarsa).
